SUPPLEMENT TO  
REPORT NO.

THIS IS UNEVALUATED INFORMATION

25X1

1. Dipl. Ing. Guenther Dobke, German chief of the Rectifier Bureau has left and obtained a position with the AEG Berlin N 58, Brunnenstrasse. The Soviet management of the Rectifier Bureau tried to persuade Dobke to stay on and offered him wide concessions. Acting Chief for Dobke now is Herr Filbrich, who is in charge of the department dealing with Ersatzpruefschaltung at the Rectifier Bureau.
2. In the beginning of 1950, the Rectifier Bureau is expected to move to the premises of the Varta Akkumulatoren-Fabrik, Berlin-Oberschoeneweide, Wilhelminenhofstr. 68-69, which belongs to the SAG "Kabel". The Rectifier Bureau is expected to expand into a rectifier plant with a yearly production capacity of 300 rectifiers and to have at its disposal 16 pump stands as against two now available. This rectifier plant is expected to work in two shifts, with one shift in reserve which is to be employed whenever the necessity should arise. The new plant will become part of a Soviet corporation, most likely the SAG "Kabel". The latest rumor, however, has it that the Rectifier Bureau will establish itself on the premises of the Apparatefabriken Treptow, Hoffmannstr. 15-23 which belongs to the SAG Izolyator. As markets for the 300 rectifiers produced yearly the USSR and Soviet satellite countries are considered. It is not expected that the rectifier plant will start production before spring 1950 because so far no preparations at all have been made for the procurement of additional machinery and installations. Suggestions for converting the Rectifier Bureau into a factory have already been worked out by Dipl. Ing. Michacker\* who is in charge of planning at the Rectifier Bureau.

25X1 [ ] Comment: Di-1. Ing. Eichacker formerly was production chief of the Siemens-Schuckert plant in Rochlitz.
